Review of the 70 SOL profit claim

SHYFT cash result including repeat purchases by linked wallets

CqPsrJcJq9DLefXZyWmj7vmvANYYkCoK94poJcZxpump

The identified trades do not support a 70 SOL result. The original 30 addresses generated a cash result of +377.51 SOL. Repeat trades by another 68 linked addresses reduce this to **+190.77 SOL**, after the trading and preparation costs included in the calculation.

+377.51

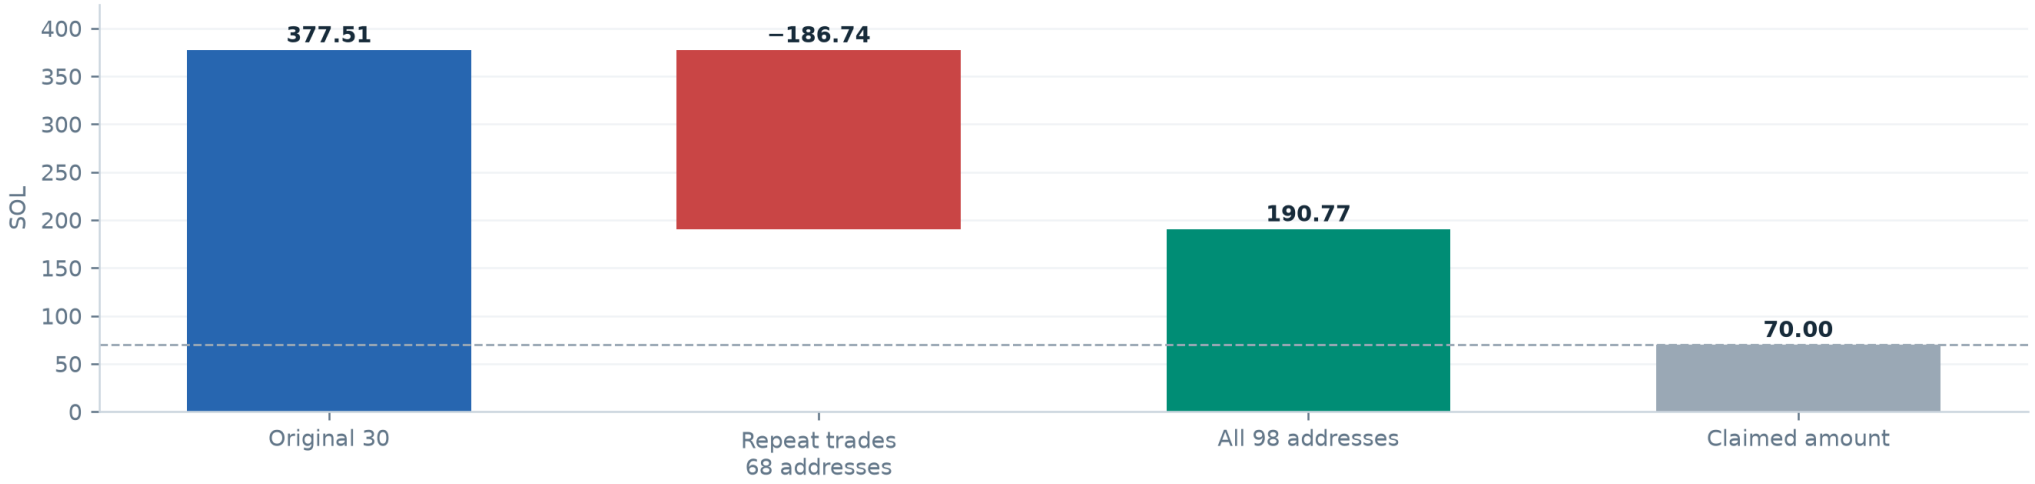

Original 30 addresses

-186.74

Repeat trades: 68 addresses

+190.77

Total for the traced group

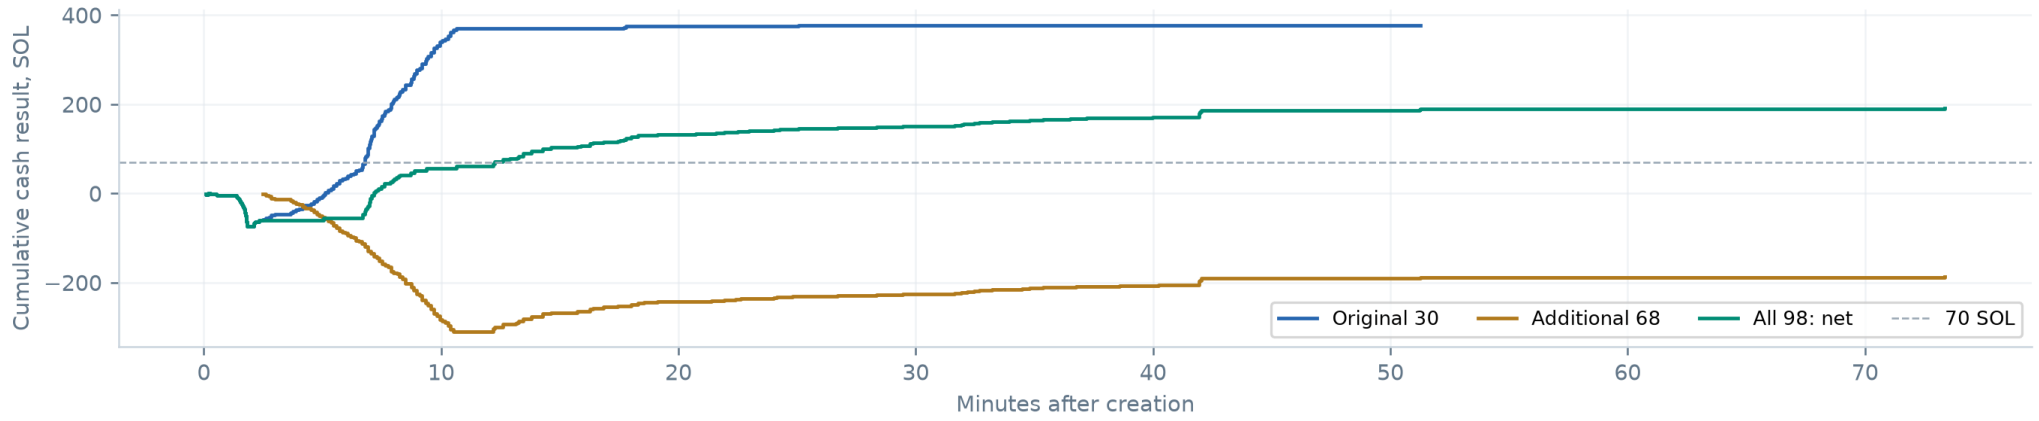

A gap of 120.766018272 SOL remains versus the claimed 70 SOL. This would require documented additional costs, a different wallet scope, or agreed profit-sharing terms. A 70 SOL transfer or a repayment through a CEX does not establish that result by itself.

Reconciliation of the cash result

SOL and WSOL are combined; internal capital transfers are neither income nor expense

Metric	Original 30	Additional 68	All 98
Buys, including costs within transactions	88.411909535	310.787951892	399.199861427
Proceeds from sales	469.316795372	124.076559293	593.393354665
Costs of outgoing SHYFT transfers	0.001505440	0.007585200	0.009090640
Separate preparation costs	3.393906704	0.024477622	3.418384326
Cash result	**377.509473693**	**-186.743455421**	**190.766018272**

Formula: 593.393354665 - 399.199861427 - 0.009090640 - 3.418384326 = **190.766018272 SOL**.

This is a cash result, not FIFO realized profit. The full purchase cost has been deducted; unsold tokens are not valued. Separate funding, withdrawal and intermediary-route costs are presented outside this base formula.

Additional costs and small residual amounts

The base result already includes costs within trades. These are separate amounts deducted on top.

WSOL preparation outside SHYFT transactions	0.018230372 SOL
Network fees on separate SOL transactions	0.001077500 SOL
Small outgoing amounts / reserves[1]	0.055286920 SOL
Other failed transactions[1]	0.000940000 SOL
Funder debits above recipient credits[1]	0.041636900 SOL
Network fees and small payments along routes	0.074900000 SOL

Scenario: deducting all additional amounts

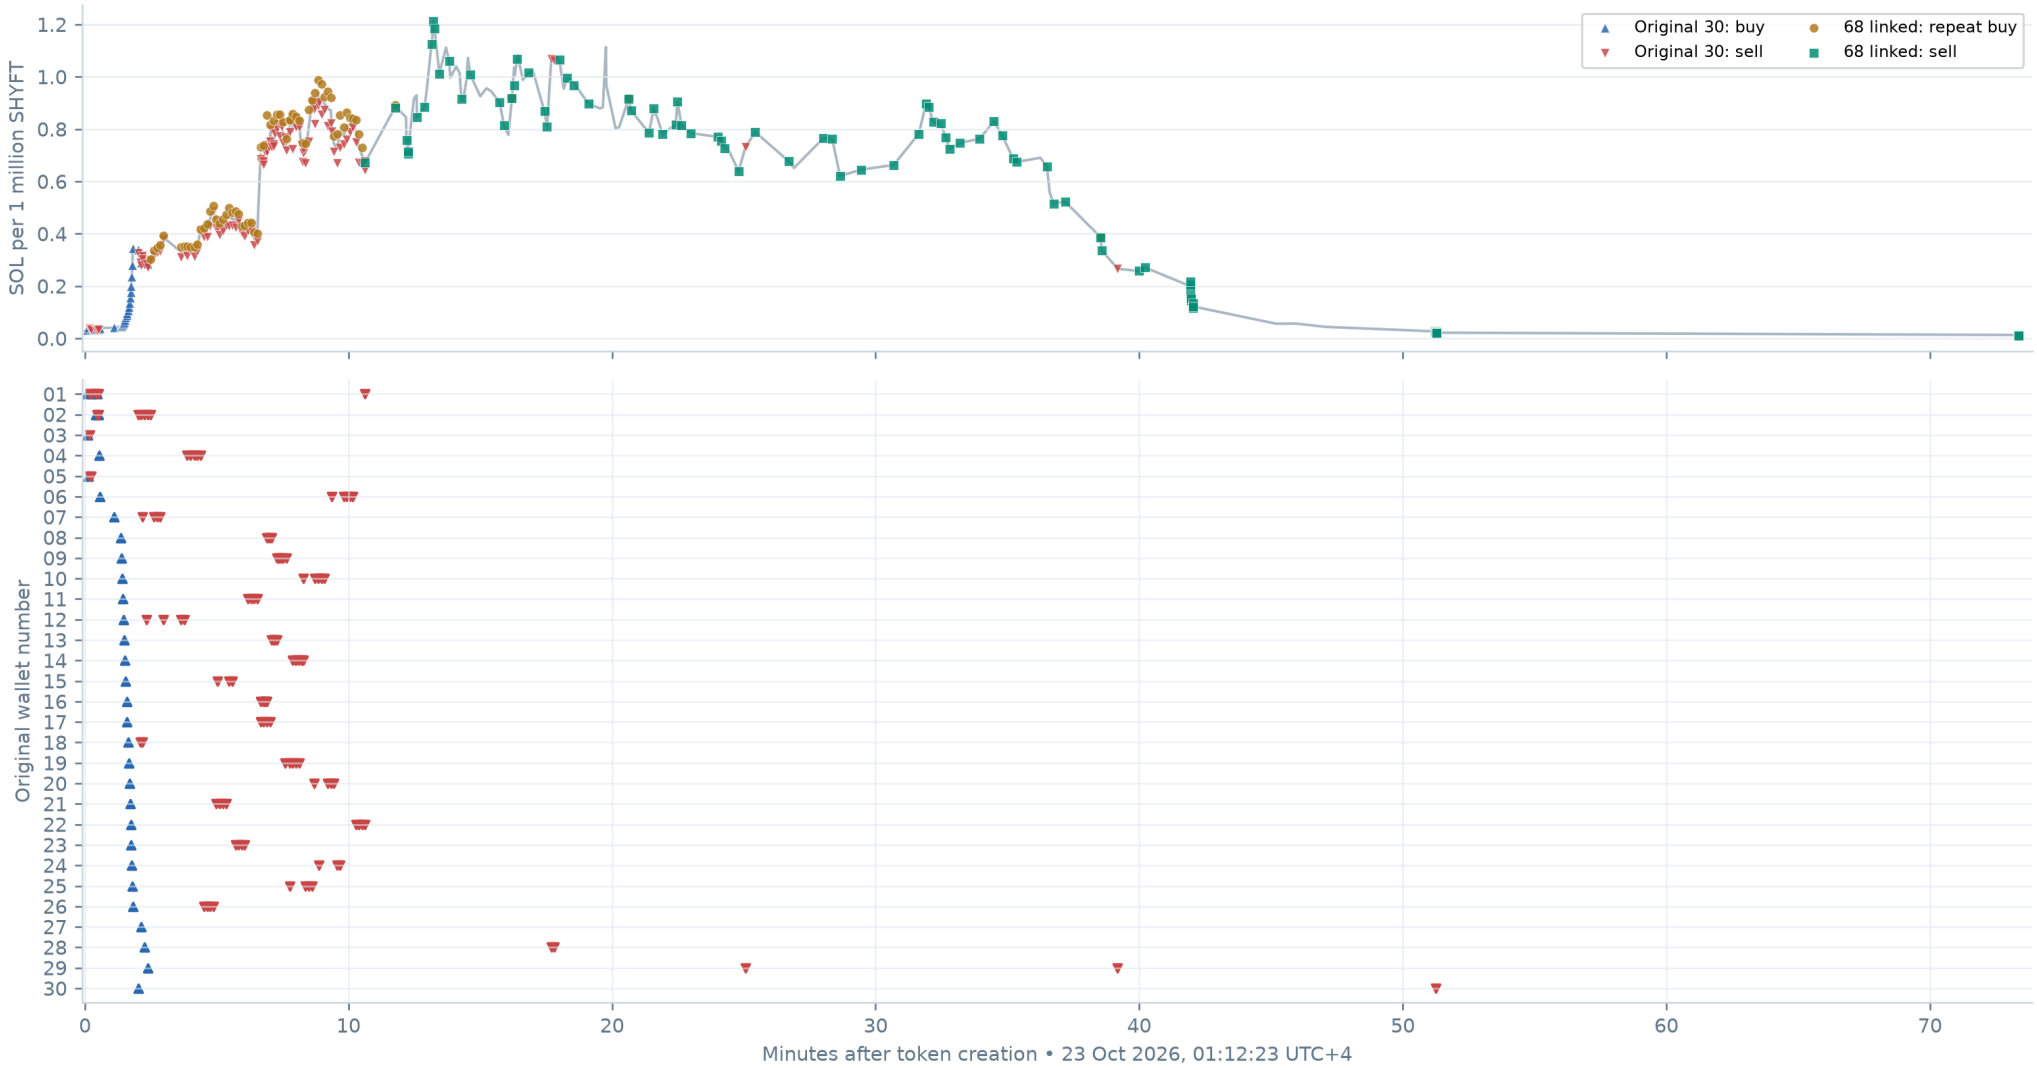

Deducting every row above plus 0.061689379 SOL of small withdrawals gives **190.512257201 SOL**. All 107 major routes have been checked.

[1] These amounts are not all proven SHYFT-specific expenses: some relate to general operations and wallet reserves. Deducting them in full is a conservative scenario, not a precise accounting allocation. Other tokens are excluded from the main calculation.

Small withdrawals of up to 0.005 SOL per address (20 transfers totaling 0.061689379 SOL) were not traced through every subsequent hop. They are deducted in full in this scenario, showing their maximum direct impact without assuming common ownership of recipients.

When the wallets bought and sold

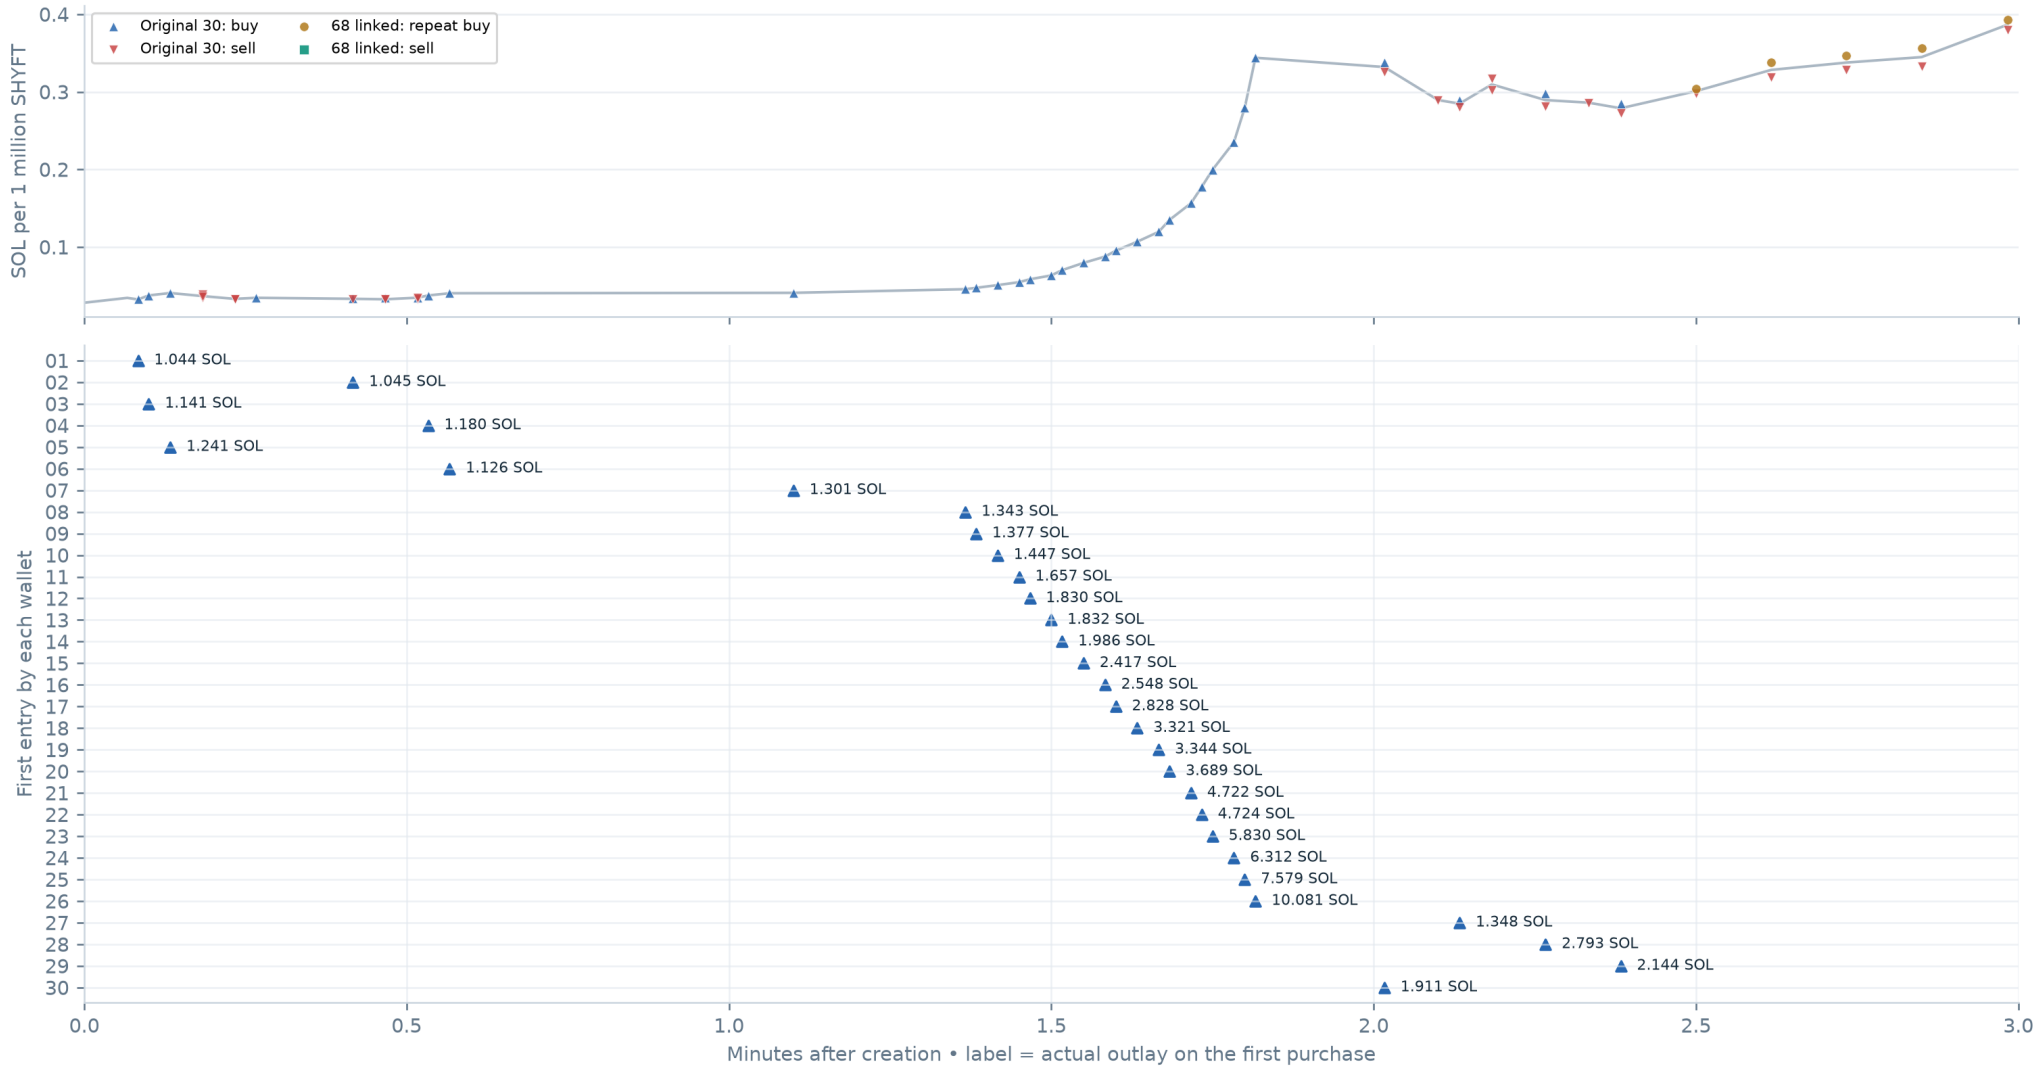

Top: price derived from pool reserves. Bottom: all trades by the original 30 addresses, using their register numbers.

359 observations from verified transactions; median per second. Markers show the pool price after each transaction, not the average execution price. Trades by all 98 addresses are available in the interactive chart.

First entries: 5-143 seconds after launch

Created at 01:12:23. First buys by the 30 addresses: 01:12:28-01:14:46; total outlay 85.140054045 SOL.

Close timing and common funding support a linked operation. These purchases span multiple slots; this review cannot establish that they formed a single atomic Jito bundle.

Common funding source confirmed

All 30 original addresses link to Hg29…UzL3 for the SHYFT operation; this is not a claim about their first-ever funding.

Verification. For #01-26, the same transaction shows a SOL debit from Hg29… and a credit to the trading address through intermediate accounts. For #27-30, #02 is the source in the relevant transaction. Both balance changes, the timestamp and full signature are retained in the evidence.

Common operational funding does not establish legal ownership. Funding amounts are not equivalent to SHYFT purchase costs: these addresses also traded other tokens. First-ever historical deposits are distinguished from funding before the launch.

Funding evidence: all 30 addresses

Amount = all identified funding before the first buy. Blue reference numbers open individual transactions in Solscan.

[1] Costs beyond those already included within trading transactions. #25 also transferred 10 million SHYFT to an external recipient; that was a token transfer, not a sale. Full lamport precision is preserved in 30-wallets.csv.

Buybacks traced from proceeds to purchases

All 68 chains are within one slot; in 63 cases, sale → transfer → buy are consecutive transactions.

Verified sequence: sell SHYFT → send SOL to a new address and create its SHYFT token account → buy SHYFT again → subsequent sales / remaining tokens. Here, 'buyback' means a repeat purchase; the blockchain alone does not establish an intention to support the price.

SHYFT purchase

New address: G4X3Cp3ADNpLDvpd7Ndc2AcBSfgrFUhxteWNuNAJMM7
It subsequently sold tokens in three trades, receiving **4.861630058 SOL**. The 9.711513567 SOL purchase and these proceeds are included in the additional 68 addresses' result. The 9.728574704 SOL funding transfer is not deducted again. Order within slot 460185981: **#349 → #350 → #351**.

All additional entries: 68 purchases cost 310.787951892 SOL; 99 sales returned 124.076559293 SOL. Including preparation and SHYFT transfer costs, this part has a cash result of **-186.743455421 SOL**. Three further buys by the original 30 addresses are already included in their own result.

Remaining tokens: 106,843,602.069960 SHYFT on 38 of 98 addresses. Another 67,003,134.999999 SHYFT were sent to six external recipients. Their later sales and USDC conversions are not attributed to the group without evidence of common control; the transferred tokens' purchase cost is already fully deducted.

Six SHYFT recipients: outside the core scope

Their tokens came from the examined group, but common control of these recipients has not been established.

Transfers of 67,003,134.999999 SHYFT to six addresses were identified. Five subsequently sold tokens, including conversions into USDC; one retained 5 million SHYFT. Such sales cannot be identified solely from increases in SOL balances.

Recipient	SHYFT received	Trades	Trade Δ SOL	Trade Δ USDC
4FCBP2WKhfkEDvTg2YDCFzpcNVQ9jt6qwoKnPAEQqHiU	10,123,635.000	1	-0.000086	101.314274

DNnrBVQ8Rk2vP7w2YhKHC1frPGmdj4kyqSTYD2QdDrpK	5,000,000.000	0	0.000000	0.000000
DqknfnupGSaYFRdwUhARsCnJC3iUMZS5kiMK9T1ShHKB	11,516,000.000	17	-0.060735	1,277.470569

Total changes in these SHYFT trades: +6.461868808 SOL and +3,022.411308 USDC at the recipients. These are not added to the 98-address result. Fees paid by third-party payers and other recipient activity were not separately allocated.

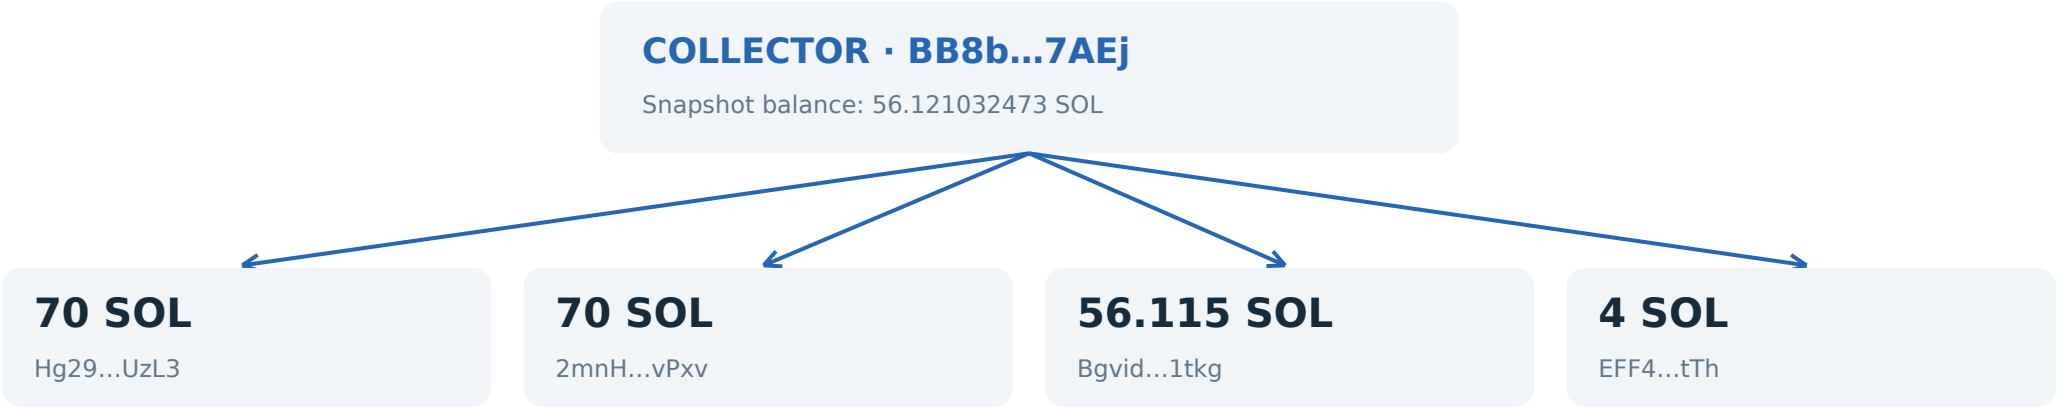

If these addresses are established as part of the operator's activity, their results should be included with all currencies and expenses preserved. Without that evidence, sales of transferred tokens cannot automatically be treated as the operator's profit. The tokens' full purchase cost is already deducted from the 98-address result.

SOL withdrawals and conversions

Moving funds, returning capital and converting SOL into USDC are not repeat purchases of SHYFT.

Collector: BB8bMKc4FcmNWwbSvykwqd8WFNHMmsWiMBneTDue7AEj
Received **256.236352209 SOL** during the reviewed period. These are gross receipts, including capital, not a separate measure of profit. Routes have been checked to the stated boundaries.

107 chains: 67 ended at BB8b… (256.188660830 SOL), 40 at Hg29… (37.993483858 SOL). All intermediate transfers were checked; no new SHYFT buyers were found along these routes.

127 SOL from the funder: transfers of 46.6 + 39.5 + 40.9 SOL to three addresses resulted in USDC purchases, with no SHYFT purchase found at those addresses. A conversion changes the currency of the asset; it does not reduce the SHYFT result by 127 SOL.

Example of a long withdrawal: #08 sent 23.941698419 SOL; after 100 intermediate addresses, the collector received 23.940998419 SOL. The 0.000700000 SOL difference is the route cost. All 101 transfers are retained in example-withdrawal-path.csv.

Where large volumes of unrelated funds are mixed, subsequent activity cannot all be attributed to this launch. Repayment through a CEX does not establish the user's contractual share from this on-chain trail alone.

Repeat-buyer register · 1/2

Numbers 31-98 match the interactive chart. Each address's result already includes its allocated costs.

The path from the source sale to the SOL transfer and new wallet's purchase is in buyback-proof.csv. Blue source numbers and purchase amounts open the relevant transactions; all three signatures and their order are in the CSV.

Repeat-buyer register · 2/2

Numbers 31-98 match the interactive chart. Each address's result already includes its allocated costs.

The path from the source sale to the SOL transfer and new wallet's purchase is in buyback-proof.csv. Blue source numbers and purchase amounts open the relevant transactions; all three signatures and their order are in the CSV.

Verified findings and limits of precision

The calculation is reproducible from public RPC responses; source data and transactions are included.

VERIFIED

Common funding. All 30 original addresses have a path from the common source before their first buy.

Repeat purchases. The 68 additional addresses and all their identified trades are included. Three further entries by original addresses are also included.

No double counting. Internal capital transfers are excluded. SOL/WSOL and costs inside trading transactions are combined.

Token reconciliation. All 98 token balances reconcile to token balance changes: 101 buys, 215 sells and 10 outgoing SHYFT transfers.

LIMITATIONS

Not a final amount payable. 190.77 SOL is the result within the examined on-chain scope, not an established debt. Profit shares, external expenses and CEX repayment attribution are unknown.

Unvalued holdings. Unsold SHYFT are not added to the result. External recipients' proceeds are excluded because common control is unproven.

Withdrawals and service costs. Separate funding and intermediary withdrawal fees are outside the base formula. They are not repeat purchases.

Sampled price chart. Reserves come from 359 verified transactions. Gaps between observations do not imply an absence of other trades.

What would substantiate 70 SOL: a reconcilable schedule of additional costs/distributions totaling 120.766018272 SOL versus the base 98-address result; for buybacks, the funding path, purchase and all subsequent sales/balances. A single 70 SOL withdrawal is insufficient.

History rechecked through finalized slot 460222992. Token balances: slots 460217130-460218948; collector: 460218950. Primary data: getTransaction/jsonParsed, getSignaturesForAddress, getTokenAccountsByOwner. Pump TradeEvent format: official pump-fun/pump-public-docs, idl/pump.json.
